Turtle Activities

1. Draw a circle whose diameter is 240, reset
2. Draw a rectangle whose length is 300 and width is 100, reset
3. Draw a rectangle whose length is 250.5 and width is 99.1, color the lines with blue and fill the rectangle with silver, reset
4. Draw an equilateral triangle with a side size equal to 250, reset. Note, an equilateral triangle has the following properties:

   - Equal sides: all three sides of an equilateral triangle are the same length.
   - Equal angles: all three angles in an equilateral triangle measure 60 degrees.
   - You need to use the **supplementary** angle for the triangle (180-60=120).

5. Draw a diamond (parallelogram) with length =200 and width =100, with angles 60, 120. Note, a Parallelogram has the following properties:

   - It is a flat shape with opposite sides parallel and equal in length.
   - opposite angles are equal (angles A are the same, and angles B are the same)
   - D+C=180, A+B=180, so they are supplementary angles.
